

IF Design Award for Nio.

Sliedrecht, February 4th, 2015

The Nio from de Jong DUKE has again been awarded with a reputable product design award. This time the **IF Design Award**.

Image: Nio 20.2

The internationally established design prize is a well-known distinction for quality & design. It represents excellent design and outstanding design achievements. The jury of independent industry experts from all over the world evaluate products against the highest standards for aspects such as choice of materials, safety, functionality, intuitiveness, environmental impact, visualization of intended use and brand value.

In a reaction to the news of receiving the IF Design Award, Maurits JC de Jong, managing director of de Jong DUKE commented: "We are extremely proud to have received another design award for the Nio. The award is a seal of approval and certificate of excellence from an international and independent panel of design experts. We, at de Jong DUKE also consider this to be a recognition of the work and effort put into the Nio by our engineers, designers, suppliers and all people who contributed to the project. It is an endorsement of our product development philosophy that focuses on adding value while at the same time maintaining a clear view on the performance and reliability without compromising on design or customer experience."

De Jong DUKE, established 1957, is a Dutch, privately owned designer and manufacturer of high quality coffee machines. With facilities in Sliedrecht, The Netherlands and Taylor, Michigan in the US the company has built a solid reputation as a world-wide supplier of reliable, durable and user-friendly coffee equipment and has proven to be a loyal partner to some of the most successful companies in the coffee industry.

The Nio was designed in cooperation with the design team from Scope, a Dutch design company that worked with de Jong DUKE on numerous products including other award winning office coffee machines Virtu and Zia.

Quality drinks from a machine with great capacities and useful features in an easy to use and proud yet stylish design, the Nio from de Jong DUKE confirms what you expect; a surprising coffee experience from a professional and distinguished looking machine.

With its compact dimensions, CoEx®-brewer, a 10.4" high resolution full color touch screen and comprehensive versatility featuring f.e. milk topping and/or fresh milk versions the Nio is easy to set up for both self-serve and full-serve mode. This combined with a possible daily throughput of 150 plus drinks make the Nio a perfect fit for many office locations or foodservice applications. Options like a waste guide, drain connection and automatic cleaning make the machine ideal for any mid-size volume location where a high quality beverage should be combined with an easy and hassle free operation.

A very useful feature of the Nio is that it can be cleaned and operated without having to open the machine. Filling, cleaning and the removal of used grounds can be done from the outside of the machine. This *keyless cleaning & operation* feature (also dubbed "closed-door-cleaning") will make taking care of the machine an easy task while keeping your hands clean. The tag line 'Nio – coffee made easy' tells the story. With a 'push of a button', the Nio brews your cappuccino, espresso or latte macchiato while operating and maintaining the machine has never been easier.

The ingeniously-placed full color LED lights in the ingredient canisters allow you to tune the machine to its environment and also assist in the operation of the machine. A misplaced canister or a full waste bucket will be shown with subtle visual indicators. The visible ingredients not only add to the experience when enjoying your drink but also allow for easy filling.

Customization is possible through adjustments of the menu's, selections, icons and cup sizes. Further fine-tuning can be done through the use of images and communications in the standby mode and preparation of the beverages. With additional software and a LAN or WiFi connection, the machine can be brought on-line for either communication purposes or for remote access and advanced monitoring. The Connect.Me® software can also enable you to optimize service, reduce cost and improve the users experience.

The recommended retail price range starts at € 4.400 and remains below € 7.500 for an advanced configuration with double beans, double soluble canisters and a 4 liter fridge for fresh milk.
